

Citywide's diversity matched by Sustainable Solutions

Continued from page 10

Open Space and Environmental Services. Each division delivers team a number of specialised services and is supported by highly experienced corporate personnel. To provide easy customer access and to quickly ascertain the appropriate response, the three divisions are integrated by advanced communications and operational systems.

Citywide Open Space

Citywide's Open Space Division provides innovative, sustainable garden design and management of public parks and space. The company believes it is essential that Australians are able to enjoy the great outdoors at its best.

The Open Space team is a group of skilled horticultural and arboriculture professionals who know how to put new life into public areas such as city parks, boulevards, sports grounds and riverside gardens. The team also provides maintenance and expert risk management to ensure that the investment made by government and taxpayers is cost effective.

A number of open spaces have benefited from this expertise including Melbourne's world heritage listed gardens and Sydney's iconic parks as well as major bushland revegetation and the production of street floral displays for special events.

Citywide Infrastructure Division

Citywide's Infrastructure Division delivers civil infrastructure and related services including project management and maintenance activities. It has an extensive fleet of modern plant and equipment, which provides a capability and a capacity to respond to any project requirement. It's in-house expertise and its ability to remove construction risk by responding with strategic and innovative solutions ensures that the function, performance and the life of the asset will be maximised.

The infrastructure team provides consultancy services in design, engineering, feasibility and project evaluation and delivers the full scope of civil infrastructure and road maintenance and construction works.

All of its experienced and highly skilled teams are fully supported by an extensive resource base and have the capability and capacity to respond to emergency situations such as a major storm event or damage to civil infrastructure.

To further support the Infrastructure Division, Citywide has the most environmentally sensitive Asphalt Plant in the southern hemisphere strategically located in North Melbourne. This allows the company to supply innovative and quality asphalt products for projects in and around Melbourne with the second plant catering for projects in and around Melbourne including its revolutionary *GreenPave* Warm Asphalt Mix.

Citywide Infrastructure provides a completely integrated service for major road works and reinstatement projects. The asphalt facility is capable of producing paving products for both large and small projects, whether for intricate city laneway systems or major projects such as metropolitan Melbourne's CityLink network.

Above: Stabilising team consist of a three or four man crew plus traffic control. Citywide operates three Stabilising crews out of their Echuca depot.

Below: Iveco Twin Steer holds 3000l of emulsion and 5000l water.

Citywide Environmental Division

Citywide Environmental Services delivers efficient waste management and street cleansing services. The team is responsible for cleaning and maintaining high profile public spaces, iconic boulevards and precincts.

Citywide's waste management services extends beyond collecting waste and involves community education programmes, sustainable processing of waste material as well as ongoing research and development in world's best practice waste management delivery solutions.

Citywide also pioneered the use of alternative fuel technology to reduce emissions and minimise environmental impacts. The company recently introduced an innovative GPS system which enables real-time tracking of vehicles and their movements.

This serves to optimise the deployment of waste and street cleaning vehicles and provides invaluable logistical analysis so that routes can be streamlined or modified to ensure greater efficiency and lessen negative environmental impacts in delivering waste collection services.
